

Tableau project guideline

STEP 1: Analyse requirements

Collect requirements

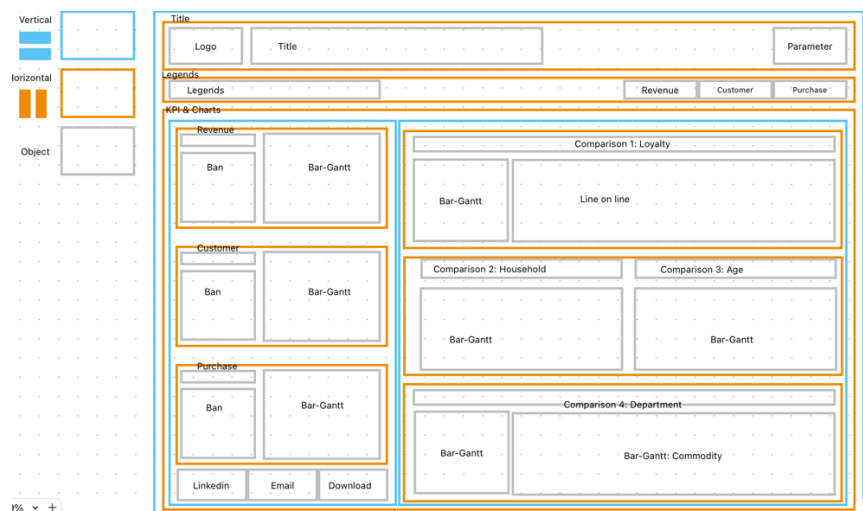

1. Dashboard purpose
 - Who: SF stakeholders
 - What: overview of revenue, comparisons of revenue by categories
2. Key requirements
 - KPI: Revenue, total purchase, total customers
 - Categories for comparison: Loyalty, Household, Age, Department (will have a tooltip Commodity chart option)

Choosing the right charts

- KPI: bars and bar charts
- Comparisons: bar in bar, and line chart

Draw mock-ups/drafts

Using Apple's Freeform:

Choose colour theme:

- pastel purple, grey for main charts
- black Gantt bars for PY comparison
- deep orange for negative KPI

STEP 2: Data Source

Connect data – data provided by RMIT University

Create data model – table has been merged from tasks prior

Rename fields and tables – done

Check data types – all data types are correct

Understand data

- Department and Commodity columns are placed in a hierarchy
- (Main) Dimension to compare based on stakeholder's request: Loyalty group

STEP 3: Start building charts

Create calculated fields & test them before using

- Parameter (year)
- CY and PY metrics: Revenue, total order, total customers
- % CY vs PY difference (customise using this ▲ 0.00%; ▼ -0.00%;)
- MinMax CY/PY

Build chart

Format (remove lines/grids, clear up axis, colour, tooltips)

STEP 4: Build dashboard

Draw mock-up for container

Create container structure

Put all charts together

Formatting checklist:

- Distribute object evenly
- Formatting
- Fit "entire view"
- Add legends
- Add spaces

Add filters & dynamics

Add icons
